SUBSPECIALTY CERTIFICATION EXAMINATION IN EPILEPSY MEDICINE

2014 Content Blueprint

(November 26, 2012)

Num	Number of questions: 200				
I.	Classification	7–9%			
II.	Routine EEG	16–20%			
III.	Evaluation	22–26%			
IV.	Management	38–42%			
V.	Systems-based practice issues	1–3%			
VI.	Mechanisms of the epilepsies	7–9%			
TOT	AL	100%			

Note: A more detailed content outline is shown below.

SUBSPECIALTY CERTIFICATION EXAMINATION IN EPILEPSY MEDICINE

2014 Content Outline

Conte	ent area	as			
I.		ificatio	n		
	A.	Classi	ification	of the	seizures
		1.	Gener	alized	
			a.	Tonic c	clonic (in any combination)
			b.	Absenc	ce
				i.	Typical
				ii.	Atypical
				iii.	Absence with special features
					a) Myoclonic absence
					b) Eyelid myoclonia
			c.	Myoclo	
					Myloclonic
					Myoclonic atonic
					Myoclonic tonic
			d.	Clonic	
			e.	Tonic	
			f.	Atonic	
		2.	Focal	TA7°11	
			a.		at impairment of consciousness/ responsiveness
					With observable motor or autonomic components
					(roughly corresponds to the concept of "simple partial seizure")
				-	Involving subjective sensory or psychic phenomena
					only (corresponds to the concept of "complex partial
					seizure")
			b.		mpairment of consciousness/ responsiveness (roughly
					ponds to the concept of "complex partial seizure")
			C.		ng to a bilateral, convulsive seizure (involving tonic,
					or tonic and clonic components: replace the term
					darily generalized seizure")

	3.	May		ıl, generalized, or unclear
		a.	Epile	ptic spasms
В.	Elect	tro-clin	ical syr	dromes and other epilepsies
	1.	Ву а	ge of or	nset
		a.	Neor	natal period
			i.	Benign familial neonatal seizures (BFNS)
			ii.	Early myoclonic encephalopathy (EME)
			iii.	Ohtahara syndrome
		b.	Infan	ncy
			i.	Migrating partial seizures of infancy
			ii.	West syndrome
			iii.	Myoclonic epilepsy in infancy (MEI)
			iv.	Benign infantile seizures
			v.	Benign familial infantile seizures
			vi.	Dravet syndrome
			vii.	Myoclonic encephalopathy in nonprogressive
				disorders
		c.	Chilo	lhood
			i.	Febrile seizures (FS+) (can start in infancy)
			ii.	Early onset benign childhood occipital epilepsy
				(Panayiotopoulos type)
			iii.	Epilepsy with myoclonic atonic (previously astatic
				seizures)
			iv.	Benign epilepsy with centrotemporal spikes (BECTS)
			v.	Autosomal-dominant nocturnal frontal lobe epilepsy
				(ADNFLE)
			vi.	Late-onset childhood occipital epilepsy (Gastaut
				type)
			vii.	Epilepsy with myoclonic absences
			viii.	Lennox-Gastaut syndrome
			ix.	Epileptic encephalopathy with continuous spike-and-
				wave during sleep (CSWS), including Landau-
				Kleffner syndrome (LKS)
			х.	Childhood absence epilepsy (CAE)
		d.	Adol	escence-Adult
			i.	Juvenile absence epilepsy (JAE)

iii. Juvenile myoclonic epilepsy (JME) iiii. Epilepsy with generalized tonic-clonic seizures alor iv. Progressive myoclonus epilepsies (PME) v. Autosomal dominant partial epilepsy with auditor features (ADPEAF) vi. Other familial temporal lobe epilepsies C. Less specific age relationship 1. Familial focal epilepsy with variable foci (childhood to adult) 2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults 5. Stroke		
iv. Progressive myoclonus epilepsies (PME) v. Autosomal dominant partial epilepsy with auditor features (ADPEAF) vi. Other familial temporal lobe epilepsies C. Less specific age relationship 1. Familial focal epilepsy with variable foci (childhood to adult) 2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults		
v. Autosomal dominant partial epilepsy with auditor features (ADPEAF) vi. Other familial temporal lobe epilepsies C. Less specific age relationship 1. Familial focal epilepsy with variable foci (childhood to adult) 2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults	with generalized tonic-clonic seiz	ic seizures alone
features (ADPEAF) vi. Other familial temporal lobe epilepsies C. Less specific age relationship 1. Familial focal epilepsy with variable foci (childhood to adult) 2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTLL with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults		
vi. Other familial temporal lobe epilepsies C. Less specific age relationship 1. Familial focal epilepsy with variable foci (childhood to adult) 2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults	ıal dominant partial epilepsy with	with auditory
C. Less specific age relationship 1. Familial focal epilepsy with variable foci (childhood to adult) 2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults	(ADPEAF)	
1. Familial focal epilepsy with variable foci (childhood to adult) 2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults	nilial temporal lobe epilepsies	es
2. Reflex epilepsies D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults		
D. Distinctive constellations 1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults	with variable foci (childhood to a	d to adult)
1. Mesial temporal lobe epilepsy with hippocampal sclerosis (MTL) with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults		
with HS) 2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults		
2. Rasmussen syndrome 3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults	pilepsy with hippocampal scleros	clerosis (MTLE
3. Gelastic seizures with hypothalamic hamartoma E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults		
E. Epilepsies attributed to and organized by structural-metabolic causes 1. Structural (including tumors, vascular malformations) 2. Infection 3. Trauma 4. Perinatal insults		
 Structural (including tumors, vascular malformations) Infection Trauma Perinatal insults 	hypothalamic hamartoma	
2. Infection 3. Trauma 4. Perinatal insults	rganized by structural-metabolic	bolic causes
3. Trauma 4. Perinatal insults	umors, vascular malformations)	ons)
4. Perinatal insults		
5. Stroke		
6. Malformations of cortical development	1	
a. Neurocutaneous disorders	s disorders	
7. Mitochondrial and metabolic disorders	tabolic disorders	
F. Epilepsies of unknown cause		
G. Conditions with epileptic seizures traditionally not diagnosed as a form	zures traditionally not diagnosed	osed as a form of
epilepsy		
1. Benign neonatal seizures (BNS)	res (BNS)	
2. Febrile seizures (FS)		
H. Nonepiletic paroxysmal disorders:	rders:	
1. Breath holding spells		
2. Cardiac etiologies: e.g. prolonged QT intervals	prolonged QT intervals	
3. Convulsive		
4. Reflux and Sandifer syndrome	rndrome	
5. Syncopal events		
6. Gratification phenomena and masturbation	na and masturbation	
7. Shuddering/shivering		

8. Acute confusional migraine 9. Benign infantile myoclonus 10. Nonepileptic seizures I. Epidemiology	
10. Nonepileptic seizures	
I Enidemiology	
1. Epideimology	
II. Routine EEG	
A. Normal	
1. Activation and procedures	
2. Benign variants	
3. Artifacts and technical issues	
B. Interictal epileptiform patterns	
C. Ictal patterns (localization, status, hypsarrhythmia,	ictal neonatal
seizures)	
D. Encephalopathic patterns	
III. Evaluation	
A. History, examination, and semiology	
B. Chemical and metabolic screening	
C. Specialized EEG	
1. Other supplementary and ambulatory	
2. Video EEG	
3. Invasive EEG recordings	
a. Depth electrodes	
b. Subdural grid electrodes	
c. Corticography	
i. Functional mapping	
D. Imaging	
1. Choice of structural imaging (CT, MRI)	
a. Specific protocols	
2. Functional imaging	
a. SPECT	
b. PET	
c. MEG	
d. MRS	
e. fMRI	
f. Diffusion tensor imaging	
E. Neuropsychological testing	
F. Spinal fluid analysis (lumbar puncture)	

	G.	Gene	etic analysis
IV.	Man	ageme	
	A.	Princ	ciples of management
		1.	History of new-onset seizure(s)
		2.	Acute seizure management
		3.	Monotherapy vs. polytherapy
		4.	Antiepileptic drug selection
		5.	Dosing and drug monitoring
		6.	Comorbidities (e.g., psychiatric issues, cognitive issues)
		7.	Special situations
			a. Neonate
			b. Developmental delay
			c. Cognitively impaired
			d. Women with epilepsy
			e. Elderly
			f. Systemic illness
			i. Hypoxia-ischemia
		8.	Discontinuation of medication
		9.	Mortality
			a. SUDEP
	В.		epileptic therapies
		1.	Specific drugs (regular and extended-release formulations)
			a. Acetazolamide
			b. ACTH
			c. Carbamazepine
			d. Clonazepam
			e. Clorazepate
			f. Diazepam (oral and rectal gel)
			g. Divalproex sodium
			h. Ethosuximide
			i. Felbamate
			j. Gabapentin
			k. Lacosamide
			l. Lamotrigine
			m. Levetiracetam
			n. Lorazepam

	o. Oxcarbazepine
	p. Phenobarbital
	q. Phenytoin
	r. Pregabalin
	s. Primidone
	t. Rufinamide
	u. Tiagabine
	v. Topiramate
	w. Valproate
	x. Vigabatrin
	y. Zonisamide
	z. Ezogabine
	aa. Clobazam
2.	Mechanisms of action of above drugs
3.	Drug interactions (pharmacokinetic/ pharmacodynamic
4.	Drug toxicities and teratogenicity
5.	Monitoring principles
6.	Other therapies
	a. Diet therapies
	i. Indications
	ii. Patient selection
	iii. Monitoring
	iv. Duration
	b. Hormonal therapies
	i. ACTH
	ii. Other steroidal therapies
	c. Immunoglobulin therapy
	d. Vagus nerve stimulation
	e. Other forms of stimulation
	f. Alternative and complementary therapies
C. Surg	gical therapies
1.	Indications for referral
	a. Definition of intractable epilepsies
	b. Duration of epilepsy and failure of response to medication
2.	Evaluation for possible surgery
	a. WADA and special neuropsychological evaluation

	3.	Types of surgical procedure
		a. Focal resections
		i. Temporal lobe
		ii. Frontal lobe
		iii. Parietooccipital
		b. Hemispherectomies
		i. Neocortical
		ii. Standard anterior temporal lobectomy
		iii. Selective mesial resections
		c. Multiple subpial transections
		d. Corpus callosotomies
		e. Repeat surgical procedures
		f. Other
	4.	Complications of surgery
		a. Outcome
D.	Statı	us epilepticus
	1.	Classification (types)
		a. Generalized convulsive
		b. Focal, including epilepsia partialis continua (EPC)
		c. Nonconvulsive
		d. Refractory
	2.	Management
		a. Acute management
		b. Drug therapy
		i. First-line
		ii. Second-line
		iii. Third-line
		c. Anesthetic therapies
		d. Continuous EEG monitoring
	3.	Systemic complications
	4.	Outcome
E.		chosocial management
	1.	Patient and family education
		a. Drug information
		b. Compliance
		c. Safety issues

		i. Sleep deprivation
		ii. Sports participation
		iii. Drug and alcohol risks
		iv. Driving regulations
		v. Piloting regulations
		2. School and work situations
		a. IEPs
		b. ADA
		c. Disability
		3. Quality of life
		a. Dating
		b. Marriage
		c. Stigma
		4. Sleep and epilepsy
		5. Prognosis and counseling
V.	Syste	ems-based practice issues
	A.	Public policy issues (education, driving, research funding)
	B.	Working with educational systems
	C.	Employment issues
	D.	Clinical trials of new therapies
	E.	Forensic epilepsy
	F.	Ethics
VI.	Mecl	nanisms of the epilepsies
	A.	Pathophysiology of the epilepsies
	B.	Animal models
	C.	Physiological basis of epileptic EEG patterns
	D.	Pathology of the epilepsies
	E.	Genetic basis of the epilepsies
