

Clinical Chart Module Review Form

Name: _____

ABPN ID#: _____

Email Address: _____

Category (check one):

- Diagnosis TBI
- Treatment setting _____
- Type of treatment _____
- Other (describe) _____

Published best practice, practice guidelines or peer-based standards of care to be used:

VA/DoD Clinical Practice Guideline MANAGEMENT OF CONCUSSION /Mild TBI

Quality measures to be reviewed (minimum of 4):

1. TBI diagnosis
2. referral for neuropsych testing
3. comorbid disorders assessment
4. management of symptoms
5. _____
6. _____
7. _____
8. _____

The Clinical Module must be completed in three steps:

Step A: Initial assessment of five patient charts: Collect data from at least five of your own patient charts in a specific category (diagnosis, type of treatment, or treatment setting) obtained from your practice over the previous three-year period. Compare the data from the five patient cases with published best practices, practice guidelines, or peer-based standards of care (e.g., hospital QI programs, standard practice guidelines published by specialty societies), using a minimum of four quality measures.

Step B: Identify and implement improvement: Based on results from chart reviews, develop and carry out a plan to improve effectiveness and/or efficiency of your medical practice. If no areas for improvement are determined based on initial assessment, then maintenance of performance in medical practice should be reassessed in Step C

Step C: Reassessment of five patient charts: Within 24 months of initial assessment, collect data from another five of your own patient charts (may use same or different patients). Use the same category and practice guidelines for the initial assessment and reassessment steps.

VA/DoD Clinical Practice Guidelines

MENU

Management of Concussion-mild Traumatic Brain Injury (mTBI) (2016)

The guideline describes the critical decision points in the Management of Concussion/mild Traumatic Brain Injury (mTBI) and provides clear and comprehensive evidence based recommendations incorporating current information and practices for practitioners throughout the DoD and VA Health Care systems. The guideline is intended to improve patient outcomes and local management of patients with concussion/mTBI.

Disclaimer: This Clinical Practice Guideline is intended for use only as a tool to assist a clinician/healthcare professional and should not be used to replace clinical judgment.
