Instructions for the 2020 Subspecialty Certification Examination in Epilepsy Medicine

Examination Format

The 2020 Subspecialty Certification Examination in Epilepsy Medicine is comprised of 220 multiple-choice questions. Please review the 2020 Subspecialty Certification Examination in Epilepsy Content Outline [on the website](#) for detailed topic specifications. The examination questions will be delivered in four sections comprised of 55 questions each. **You can review questions only within sections. Once you finish the section, you cannot go back into it. There is no review of all questions at the end of the exam.** There is a nondisclosure agreement (NDA) that candidates must accept, followed by on-screen instructions at the beginning of the examination. At the conclusion of the examination, there is a five-minute end-of-examination survey.

During the examination, there are optional breaks between each section. The optional breaks will be offered after one section is completed and before the next section begins. Examination time continues to run during optional breaks, so candidates must manage their own time. Allotted time for the entire examination, including NDA, instructions and survey, totals four hours. The 2020 Subspecialty Certification Examination in Epilepsy Medicine Format table below demonstrates the examination delivery structure.

2020 Subspecialty Certification Examination in Epilepsy Medicine Format

	Section	No. of Questions	Format
5 min	Nondisclosure Agreement		
	On-Screen Instructions		
3 hrs 50 min	1	55	Stand-alone
	Optional Break		
	2	55	Stand-alone
	Optional Break		
	3	55	Stand-alone
	Optional Break		
4	55	Stand-alone	
5 min	End-of-Examination Survey		

*A proctor must log candidates in after breaks. Candidates must be signed in and out each time they enter and leave the testing room.

Question Type and Review

The 2020 Subspecialty Certification Examination in Epilepsy Medicine is comprised entirely of one-best-answer multiple-choice questions that can be flagged for review or skipped.

Scoring

In addition to subtest scores, candidates will receive a total percent correct score (percentage of items answered correctly, rounded to the nearest whole number). An acceptable level of performance must be achieved on the total score to pass the examination. The standards are not norm-referenced; there is no predefined passing rate for any group of candidates.

Questions that may be included in the examination solely for research or pretesting purposes will not be included in the examinee's score.

No candidate is expected to obtain a perfect score. However, in the opinion of the ABPN, each candidate should have some degree of familiarity with the subject matter of each question. Even though the candidate may be in doubt about the correct answer to a particular question, he or she should answer every question. This will increase the likelihood that the candidate's examination score will reflect the breadth of his or her knowledge of the field. There is no penalty for guessing.

Examination Functions

To familiarize candidates with the examination functions, several examination screenshots with explanations are provided [here](#). In addition to the general functions, such as Time Remaining and Number of Questions, please pay special attention to the functions for video fast forward and rewind, Comment, Scratch Pad, Highlight, Strikethrough, Flag for Review, Section Map/Drug List/Tutorial, Navigator, and other functions related to examination questions.

International League Against Epilepsy (ILAE) Classification Update

In 2017, the ILAE Classification of the Epilepsies was updated to reflect advances in the field since the last classification update in 1989. The 2020 Subspecialty Certification Examination in Epilepsy Medicine will reflect these changes as we transition from the 1989 classifications to the 2017 classifications. The format for the transition will be "2017 terminology (with 1989 terminology in parentheses)". For example, "focal impaired awareness (complex partial) seizures." For more information regarding the specifics of the Classification of the Epilepsies updates, please refer to the ILAE website [here](#).
