Instructions for the Child and Adolescent Psychiatry Certification Examination

Examination Format

The computer-delivered Child and Adolescent Psychiatry Certification Examination is comprised of three segments. At the beginning of the examination, there is a nondisclosure agreement (NDA) that examinees must agree to, followed by on-screen instructions. After the tutorial/instructions, the examination delivers 280 test questions in six sections. At the conclusion of the examination, there is a five-minute end-of-examination survey.

The total testing time is 330 minutes (5.5 hours). It includes five minutes for the NDA and on-screen tutorial/instructions, 320 minutes (5 hours and 20 minutes) for the 280 test questions, and five minutes for the end-of-examination survey. In addition to the 330 minutes of testing time, there are a maximum of 30 minutes for pooled breaks.

Break time can be accessed during the optional breaks that are offered between each section. Examinees can choose not to take breaks or to use as much or as little break time as they see fit during any given optional break (lunch time is included as part of the pooled break time); however, please note that if they exhaust the entire 30 minutes of pooled break time before the end of the examination, any time spent on subsequent breaks will decrease the available remaining examination time. To monitor the amount of break time taken and/or remaining, examinees should pay close attention to the Total Break Time Remaining field displayed on the break screens. If a negative number is displayed in the Total Break Time Remaining field, then the allotted break time has been exhausted, and the examination will have the amount of time displayed deducted from the overall examination time. Examinees are expected to manage the pace and timing of the examination themselves. The Child and Adolescent Psychiatry Certification Examination Format table below demonstrates the examination delivery structure.

Child and Adolescent Psychiatry Certification Examination Format

	Section	No. of Questions	No. of Audio/Video	Format
5 min	Nondisclosure Agreement			
	On-Screen Tutorial/Instructions			
320 Minutes (5 hours, 20 minutes)	1	45-47	NA	Stand-alone
	Optional Pooled Break*			
	2	45-47	NA	Stand-alone
	Optional Pooled Break*			
	3	47-53	5-8	Linked-Item Set
	Optional Pooled Break*			
	4	45-47	NA	Stand-alone
	Optional Pooled Break*			
	5	45-47	NA	Stand-alone
	Optional Pooled Break*			
6	45-47	NA	Stand-alone	
5 min	End-of-Examination Survey			

*This is part of the pooled break time that is not included in the 5 hours and 30 minutes of test time if the total break time does not exceed 30 minutes. During an examination, a proctor must log examinees in after breaks. Examinees must be signed in and out each time they enter and leave the testing room.

Question Type and Review

There are two types of questions in the Child and Adolescent Psychiatry Certification Examination: stand-alone and linked-item set. *Stand-alone* questions are one-best-answer multiple-choice questions that are not associated with any other questions. For *linked-item set* questions, there are typically two to nine multiple-choice questions linked to a common case that may be presented in a video clip, which may vary in length from one to five minutes; an audio clip; or a text linked-item set. The video and audio clip questions require the use of headphones to be provided by Pearson VUE.

As the above chart demonstrates, stand-alone items and linked-item set items are delivered in separate sections. In the linked-item set section, the questions are set up in a linear navigation mode. Every linked-item set question must be answered before moving on to the next question. Once an examinee has answered a question and navigates forward to the next one, the examinee *can* go back to revisit previously answered linked-item set questions within the section, but they *cannot* change the answers. After leaving the section, an examinee *cannot* review questions in that section again.

Stand-alone multiple-choice questions can be skipped or flagged for review, but after leaving a section an examinee *cannot* review questions in that section again.

Scoring

Candidates will receive a percent correct score for the total test in addition to the percent correct scores for the subtests. The percent correct score is the percentage of items answered correctly, rounded to the nearest one-tenth percent. An acceptable level of performance must be achieved on the total score to pass the examination. The passing standards are not norm-referenced; there is no predefined passing rate for any group of candidates.

Questions that may be included in the examination solely for research or pretesting purposes will not be included in the examinees' scores.

No examinee is expected to obtain a perfect score. However, in the opinion of the ABPN, each examinee should have some degree of familiarity with the subject matter of each question. Even though the examinee may be in doubt about the correct answer to a particular question, they should answer every question. This will increase the likelihood that the examinee's examination score will reflect the breadth of their knowledge of the field. There is no penalty for guessing.

CHILD AND ADOLESCENT PSYCHIATRY CERTIFICATION DEMONSTRATION EXAMINATION

To familiarize examinees with the computer-based examination interface, functionalities, and types of questions that they will find on an operational examination, there is an online Child and Adolescent Psychiatry Certification Demonstration Examination that can be found on the ABPN website [here](#).

NOTE: This is a close representation of an operational examination but not an operational examination itself. **Examinees WILL NOT be able to review their answers or receive a score after they have completed the demonstration examination.**
